MRET WATER ACTIVATOR

Healthy Water Vital for Life
It is well known that the body of an average matured person consists of 70% of water (actually from 45% for old people up to 85% for babies) and the brain contains 90% of liquid. There are many devices on the market that claim to produce water that is beneficial for health. How can you make an informed choice?

Healing Properties of Spring Water Known for Centuries
In the last few decades, serious scientific studies were conducted on biochemical, physical and microbiological properties of water. The short overview presented below will help to give answers to questions asked by many:

- What properties of water make the water beneficial for health?
- Why does the water from certain natural water springs have beneficial, healing and rejuvenating properties?
- Is it possible to have a source of such water at home?

In regard to healing water, the focus is usually on properties such as the content of minerals, redox potential (reduction-oxidation reaction), balanced pH index and more recently, the structure of water. The first three parameters are well known and rather easy to measure in appropriate laboratories. The application of the term "structured water" and the description of the properties of such water require serious scientific investigations.

What is Structured Water?
By definition, structured water is made up of molecules combined in repeating geometrical structures or clusters. Other free water molecules move around these structures. The greater the number of water molecules, along with amount of time the structure does not break up, the more effective the water structuring. For example, ice water remains structured only several minutes after defrosting. Microbiologists have determined the water inside and around the cells in biological systems has a specific, dynamic, multilayer structure. Only this type of structured water can effectively influence all life-supporting processes both inside and outside cells. For example, water with this structure has the unique capacity to create a protective water "environment" around large biological molecules and cells. This protective feature could for example, prevent red blood cells from sticking together.

Restructuring Regular Drinking Water Wastes Body’s Precious Energy
We are all subjected to numerous stresses, resulting in a lack of energy. Therefore, the body cannot always produce the necessary amount of structured water. This structured water deficit leads to the distortion of the work of all systems in the body, which creates an even greater energy shortage.
MRET Water Activating Technology Breaks Vicious Cycle
The MRET water activator structures water before you drink it. In only 30 minutes, two liters of beneficial, structured water with healing and rejuvenating properties is produced right in your own home. The beneficial properties of structured water have been extensively studied and confirmed through numerous biological and physical experiments at certified research institutions and universities. However, the MRET WATER ACTIVATOR is a household appliance, not a medical device.

MOLECULAR RESONANCE EFFECT TECHNOLOGY (MRET)
In February, 2000 Igor Smirnov, Ph. D. was granted the U.S. Patent N 6022479 for the invention of Molecular Resonance Effect Technology and the for the development of a device that activates water and liquid substances based on this technology. The process of MRET activation changes the structure of water and other liquids creating the long-range, dynamic, multilayer molecular structure similar to the structure of cell water in biological systems. During the activation process, the water is subjected to subtle low-frequency electromagnetic fields comparable to Earth’s geomagnetic field of the areas around healing water springs. These spontaneous electromagnetic fields are generated using a unique MRET polymer compound with a fractal structure and properties compatible with those existing in living tissues. Therefore, such fields can enter into a resonance with the electromagnetic signals of the cells in living organisms. The resulting generated fields structure water similar to cell water.

Safe, Non-toxic Process
MRET is a biologically safe, non-contact process. MRET water remains chemically pure and non-toxic. The water’s structural basis, along with a significant portion of the beneficial properties, can be maintained for up to 24 hours at room temperature and up to 45 days refrigerated at a temperature of +4 degrees of Celsius.

Research Conducted
The microbiological and physical properties of MRET activated water have been studied in leading research institutions and universities. The findings have been published and presented at numerous International Scientific Conferences. The structural changes in the water after MRET activation were confirmed by Nuclear Magnetic Resonance and High Voltage Photography testing. The anomalous viscosity and electrodynamic characteristics of MRET water confirmed that the long-range dynamic multilayer structuring was similar to cell water. Bioelectrical impedance analysis showed the biological compatibility of MRET water with cell water, as well as the significantly enhanced hydration capacities of the water after the MRET activation process.

The incredible health benefits of MRET water were demonstrated in the process of several microbiological investigations*: Oncology Research on 500 mice; Staphylococcal Infection Research on 400 mice; numerous experiments on the antibacterial, sterilizing effects of MRET water; the stimulating effect on the metabolic activity of complex microbiological associations similar to microbiological flora in the intestine; inhibited growth of mutated cells; enhanced morphology of red blood cells; as well as the significant rebounding effect on white blood cells during chemotherapy treatments.**
Theoretically, consuming MRET activated water could significantly enhance homeostasis, metabolism, immune response and factors such as phagocytosis, and the body’s natural resistance to bacteria, viruses and other pathogenic microorganisms.

**Unique Properties and Benefits of MRET Activated Water**

- Compatible with cell water
- Enhanced hydration capacities, making it easily absorbed by body’s tissues
- Penetration and extermination time nearly 3 times faster than regular water
- Improved nutrient transport and assimilation
- Waste elimination process and time accelerated and improved
- Detoxification increased from enhanced cellular hydration
- Metabolism increased
- Healthy cell regeneration time increased
- Enhanced homeostasis of the body
- Slows aging process, because aging is closely related to cell dehydration
- Improved look of skin, hair and nails
- Antibacterial, sterilizing effect: inhibits growth of bacteria, viruses and mutated cells
- Supports normal, healthy cell activity
- Immune system response enhanced

**Successfully Used Around the World**
The MRET WATER ACTIVATION system is being successfully used in the USA, Canada, several European countries, Singapore, Malaysia, Thailand, China, India, Australia and Southern Africa.

**Unit’s Lifespan**
MRET WATER ACTIVATOR can be used for a total of 7,200 hours. This is equivalent to 14,400 half-hour operation cycles; two years of 10-hour daily usage; 4 years of 5-hour daily usage, and most commonly five years of 4-hour average daily usage etc. After the specified term the activator has to be replaced with the new one.

**Recommended Usage**
During the initial detoxification period, or in cases of health problems, it is recommended to begin the consumption of water with ½ glass a day, gradually increasing the dosage up to three glasses a day. After the body adapts to MRET water, continue to drink it as much as you like. Use it to prepare tea, coffee, soups and other liquid products. Pets will enjoy drinking MRET water. Plants and flowers even benefit from MRET water.

**Maintenance Instructions**
Pour drinking water, milk, juice or other UNHEATED liquid products in the pitcher. Install the activator on the top of the pitcher. The **bottom portion of the activator does not touch the liquid.** Plug in the adaptor. The blinking red light shows that MRET activator works. The process of optimal activation takes 30 minutes. The timer is inside the activator. Push the light button to start the 30 minute cycle. The light button will blink. After 30 minutes, the unit will stop, indicating the water is activated. Unplug the adapter. The water (milk, juice, etc.) is ready for consumption. It is also possible to place the activator on any glass or jar with up to 2 liters volume. A gallon mason jar is a good example of an optimally sized container.
MRET Angel Water Shows Water’s Ability to Capture & Record Frequencies

MRET Angel Water came into the world out of the accident at Chernobyl, made with the world’s first MRET patented technology. The image below was done by the Masaru Emoto Laboratory in Japan. Masaru Emoto has documented that water records frequencies into itself. The frequencies it records can be seen in the frozen drops of water.

This image shows a water crystal photo of MRET Angel Water, which looks much like the water crystal of “Mujyaki,” meaning “innocent” in English.

For more information on Masaru Emoto’s work go to: http://www.masaru-emoto.net.

MRET Water Studies at Research Institutions and Universities:

• California State University, San Diego, USA
• Cedar-Sinai Medical Center, Los Angeles, USA
• Engene Biotech, Inc., Rancho Santa Fe, USA
• Nu Mega Resonance Lab, San Diego, USA
• USACAI Environmental Lab, Carlsbad, USA
• Meixa Tech Laboratory, Cardiff, USA
• Geotechnical & Environmental Sciences Lab, San Diego, USA
• Elixir-Health Ltd., Singapore
• Kyiv National Shevchenko University, Ukraine
• Kyiv Institute of Experimental Pathology, Oncology and Radiobiology of Ukrainian Academy of Science
• Kyiv Institute of Microbiology and Virology of Ukrainian Academy of Science
• Kyiv Institute of Plants Genetics of Ukrainian Academy of Sciences
• Moscow State University, Russia

The results of scientific researches, publications, scientific conferences and detailed information are presented on the Global Quantech, Inc. website: www.gqusa.com.

** Selected Research Results:

**RESEARCHES IN ANIMAL MODELS** confirmed: MRET water has very high hydration capacities, accelerates the intracellular/extracellular water exchange and enhances homeostasis, metabolism, immune response and factors, such as phagocytosis, the body’s natural resistance to the penetration and reproduction of bacteria, viruses and other pathogenic microorganisms.

Oncology Research on 500 mice: MRET water increased the life span by 61% and inhibited the tumor growth by 76% during three weeks of testing.

Staphylococcal Infection Research on 400 mice: 0% death rate on MRET water verses 30% death rate on regular water, during nine days of testing.

**SCIENTIFIC INVESTIGATIONS IN VITRO** confirmed: MRET water significantly inhibits the growth of bacteria, viruses and mutated cells.
